場 所 臨床研究棟 1 階ラウンジ

演 題 **Learning from Adlerian Psychology : Student Education, Medical Office Management, and Organizational Reform - Insights from Two Years of Implementation at Gifu University**

Masanori Isobe MD., PhD

Department of Obstetrics and Gynecology, Gifu University

This study reports on a two-year implementation of student education, departmental management, and organizational reform at Gifu University, guided by principles of Adlerian psychology. Management strategies grounded in trust and empathy resulted in a record-high number of new residents, a substantial increase in surgical case volume, and the achievement of zero staff turnover. Through detailed examples of organizational development informed by the concepts of encouragement and teleology, as well as educational approaches designed to promote professional and personal growth, we examine the practical applicability and potential impact of Adlerian psychology in medical education and healthcare organizational management.
